Sample Application

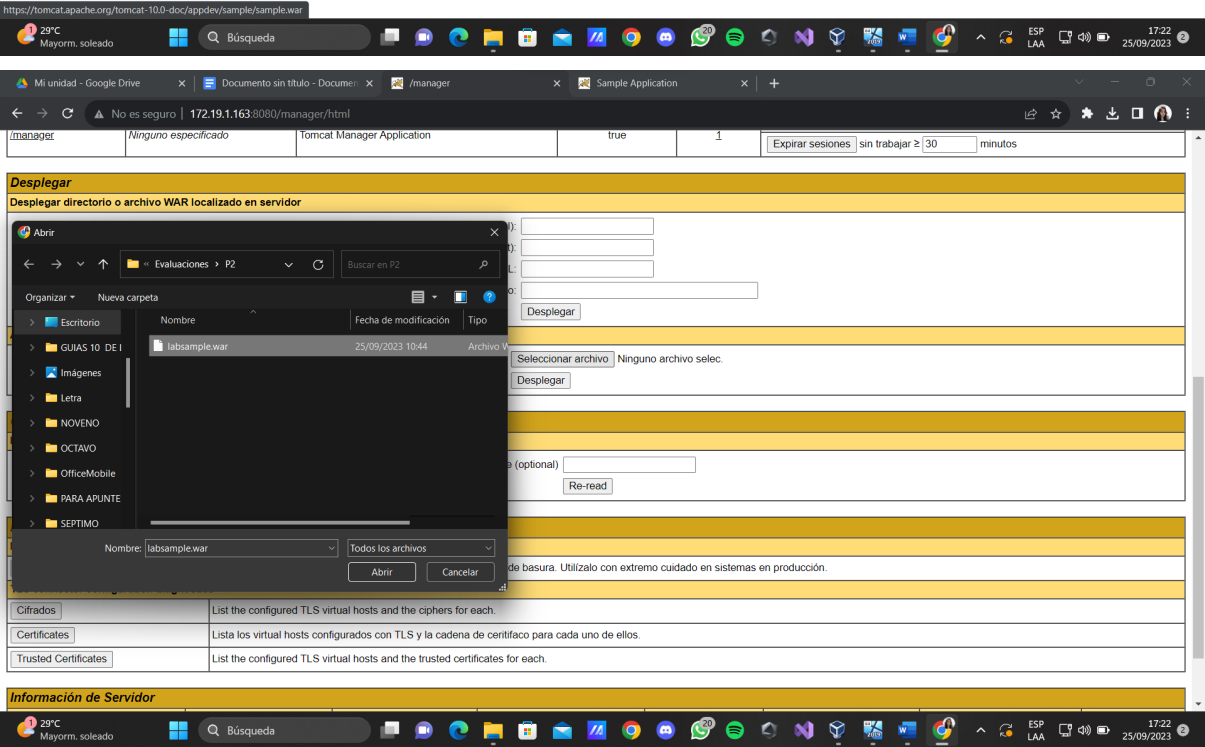

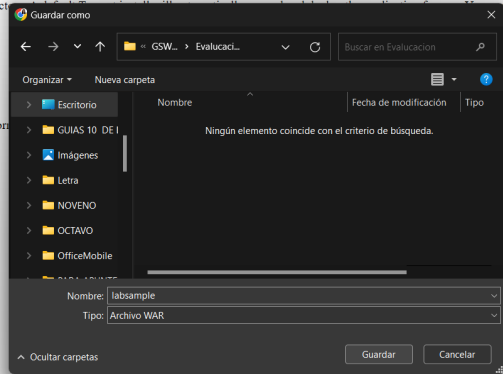

The example app has been packaged as a war file and can be downloaded [here](#) (Note: make sure your browser doesn't change file extension or append a new one).

The easiest way to run this application is simply to move the war file to your **CATALINA_BASE/webapps** directory and view it with the following URL (assuming that you're running tomcat on port 8080 which is the default): <http://localhost:8080/sample>

If you just want to browse the contents, you can unpack the war file with the **jar** command.

```
jar -xvf sample.war
```

Note: **CATALINA_BASE** is usually the directory in which you unpacked the Tomcat distribution. For more information, see the [Tomcat documentation](#). **ING.txt** in the

■ This is the home page for a sample application used to illustrate the source directory organization of a web application utilizing the principles outlined in the Application Developer's Guide.

To prove that they work, you can execute either of the following links:

- To a [JSP page](#).
- To a [servlet](#).

Windows taskbar showing system tray icons (clock, network, volume), search bar, and application icons (File Explorer, Microsoft Edge, Word, etc.).
